Part III DETAILED ACTION

1. The abstract of the disclosure is objected to because it is not drawn to the invention being claimed. Correction is required. See MPEP § 608.01(b).

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 21-32 are rejected under 35 U.S.C. 102(b) as being anticipated by Stokes (5,881,209).

With regard to claim 1, Stokes teaches a method for calibrating (e.g. fig. 6) a virtual printer (e.g. col. 4, lines 1-24) comprising a plurality of color marking engines (e.g. the printer uses different color using different engines), each of the color marking engines adapted to receive raster image data from a single raster image processor, the raster image data color balanced to a system color space (e.g. figs. 1-15), the method comprising: printing a test pattern on one of the marking engines, the test pattern comprising a plurality of test patches, each test patch comprising corresponding expected colorimetric values (e.g. col. 2, lines 20-34, col. 6, line 35 thru col. 7, line 21); reading the test pattern with a colorimeter to determine measured

colorimetric values associated with each of the test patches (e.g. col. 2, lines 20-34, col. 6, line 35 thru col. 7, line 21); and creating a lookup table that maps the measured colorimetric values to the expected colorimetric values (e.g. col. 2, lines 36-61, figs. 13-14 and claim 26)..

With regard to claim 22, Stokes further teaches wherein the test patches comprise cyan, magenta and yellow colorants(see figs. 5a-5b).

With regard to claim 23, Stokes further teaches 23 wherein each test patch is associated with a corresponding toner density (e.g. reads on the colorant values of fig. 13).

With regard to claim 24, Stokes further teaches wherein the test pattern comprises 256 test patches per colorant (e.g. col. 8, lines 59-64).

With regard to claim 25, Stokes further teaches wherein the colorimetric values comprise XYZ values (e.g. figs. 5a or 6).

With regard to claim 26, Stokes further teaches a printing a test pattern on each of the marking engines; reading each test pattern with a colorimeter to determine measured colorimetric values associated with each of the test patches (col. 2, lines 20-34, col. 6, line 35 thru col. 7, line 21); and creating a corresponding lookup table for each marking engine, each lookup table mapping the corresponding measured colorimetric values to the expected colorimetric values (col. 2, lines 20-34, col. 6, line 35 thru col. 7, line 21).

With regard to claims 27-32, the limitations of claims 27-32 are covered by the limitations of claims 21-26 above.

Conclusion

3. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
